Lecture 3 — The Execution Model: Stack, Heap, and the Process Address Space

Jeff Zarnett
jzarnett@uwaterloo.ca

Department of Electrical and Computer Engineering
University of Waterloo

May 30, 2026

Placeholder

This lecture is not yet written. The outline lives in the plan file.

Intended sections:

1. The process address space
2. Anatomy of a stack frame
3. Calling conventions (System V AMD64 ABI)
4. How `execve` builds the initial stack
5. Per-thread stacks and guard pages
6. Two stacks per task — user and kernel
7. Per-thread non-stack state: signals and TLS
8. Security mechanisms on the stack (forward to L05)
